

AD-201

FIPS 201-1 compliant
standalone electronic lock
with multi-technology +
keypad reader

Overview

The AD-201 is a simple and economical standalone solution for applications which require approval by the U.S. Federal Government under HSPD-12 for FIPS 201-1 compliance. The solution consists of the AD-201 integrated electronic lock with multi-technology + keypad (FMK) reader module, the handheld programming device (HHD) and the SUSB-89 enrollment reader.

The innovative modular design of the AD-201 allows reader modules and communication modules to easily be upgraded. As a result, the AD-201 standalone lock can become an AD-401 networked wireless locks in minutes, without even taking it off the door.

The FMK reader module comes standard with the AD-201 lock and also can be ordered separately for field upgrades. It is for use with PIV and PIV-I credentials. The FMK is a multi-technology reader that supports 125 kHz proximity and 13.56 MHz smart cards.

Schlage Express offline access control software is used in conjunction with the AD-201 to manage access points, users and schedules. Reporting capability is available to show audit trails retrieved, access privileges granted, and time functions established by either user or door.

The SUSB-89 is an enrollment reader is designed to simplify the credential enrollment process. You can easily enroll a PIV, PIV-I or other smart card into Schlage Express using the SUSB-89 connected to your computer's USB port.

The handheld device is the link between Schlage Express software and the AD-201 lock. It consolidates and simplifies programming and managing your access control system. It is used to initialize, configure and test product operation as well as to transfer information between the lock and the software.
