General Information

- UL labeled fire or smoke barrier door assemblies require that the 120VAC (60Hz) power input to the *LEO* door operator be supplied through normally closed alarm contacts of the alarm system / alarm panel.
- All wiring must conform to standard wiring practice in accordance with national and local wiring codes.
- Note: Unless otherwise noted, all dimensions are given in inches (millimeters).
- Minimum suggested and required material thickness for hollow metal frames (skin plus reinforcement) is charted on below.
- Unit is Non-Handed.
- Door must be hung on butt hinges [5" (127mm) max. width] or 3/4" (19mm) offset pivots. A separate door and frame preparation template will be supplied for other conditions.
- Door must swing freely through the entire opening and closing cycle before beginning the installation.
- Use of an auxiliary door stop (by others) is always recommended.
- An incorrectly installed or improperly adjusted door operator can cause property damage or personal injury. These instructions should be followed to avoid the possibility of misapplication or misadjustment.

WARNING: Make sure 120VAC (60Hz) input power is turned off at facility's main circuit breaker before proceeding with installation.

General Templating Information:

- Before beginning the installation, verify that the door frame is properly reinforced and is well anchored in the wall.
- Unreinforced hollow metal frames and aluminum frames should be prepared and fitted with 1/4-20 blind rivet nuts, furnished by others.
- Concealed electrical conduit and concealed switch or sensor wires should be pulled to the frame before proceeding.

Fasteners for Frame:

- 1/4-20 machine screws for hollow metal and aluminum.
- No. 14 x 2-3/4" (70mm) long sheet metal screws for wood.

Fasteners for Door:

- 1/4-20 machine screws.
- 3/8" diameter x 1-5/8" (41mm) long sex nut.

Electrical Information:

- Maximum current draw of unit is 0.6 amps.
- Breaker Switch protects the motor assembly and inverter; and has a 3 amp rating.
- Maximum wire size is:

14AWG at terminals 1 thru 4 on Accessory Terminal . 18AWG at terminals 22 thru 25 on "T1" Power Input Terminal.

Frame Reinforcement Table

Technical Data

Input power:	120VAC, 60Hz
Power consumption:	.6 amps
Circuit breaker:	3 amps
Power supply:	24 V DC, max. 1.1 Amp.
Door width:	28 - 48" (71-122 cm)
Door weight:	100-250 lb. (45-113 kg)
Door opening angle:	up to 110° Pull side; up to 170° Push side; Manually to 180° Push/Pull side
Hold open time:	5 - 30 seconds (A.D.A. 5 seconds min.)

ASSA ABLOY, the global leader in door opening solutions

Component Layout

ADA / ANSI / UL Information

Americans With Disabilities Act (A.D.A.)

These door operators can be installed and adjusted to conform with A.D.A. regulations.

ANSI Standards

ANSI A117.1 – These door operators permit door assemblies to conform to the requirements of this specification "for buildings and facilities – providing accessibility and usability for physically handicapped people".

 ANSI A156.19 – These products are designed to conform to this specification "for power assist and low energy power operated doors".

U.L.Listing

Underwriters Laboratories, Inc. listed for use on fire and smoke barrier door assemblies when the 120VAC (60Hz) power input is supplied through the normally closed alarm contacts of a compatible UL Listed alarm system or alarm panel.

1. Hinge (Pull) Side - Initial Frame Holes

Α

1-5/16 (33)

Door Opening

Angle

Up to 110°

3. Hinge (Pull) Side - Unit Mounting

- A. Install (2) 1/4-20 x 1" machine screws or 1/4" selfdrilling screws into holes drilled in Step 1. Leave 1/8" gap between bottom of screw head and frame.
- B. I) Install Unit Assembly over screws in previous step and ii) slide Unit Assembly toward Latch edge of door.
- C. Secure (2) screws.
- Note: Level is incorporated into back plate to aid in installation.

4. Hinge (Pull) Side - For Concealed Wiring Only

- A. Mark conduit holes using back plate as template.
- D. Install conduit in frame, if desired.E. Reinstall back plate and secure (2) screws.

- B. Remove back plate.
- C. Drill (1) Ø7/8" holes *for accessory wiring only*.

5. Hinge (Pull) Side - Remaining Mounting Screws

- A. Using Back Plate as template, locate and prepare holes in the frame.
- B. Drill #7 holes and tap 1/4-20 for Machine Screws or Self Drilling Screws (7 places).
- C. Install 1/4-20 x 1" machine screws or 1/4" selfdrilling screws into holes unless noted otherwise.
- D. Flat head screw must be used to go through the

mounting hold of the door closer body.

E. Support behind back plate is **required** (see Step 2). If support has tapped holes, RH door will use 1/4-20 x 1/2 flat head screw for closer body and 1/4-20 x 3/8 screw for second mounting hold; LH door will use (2) 1/4-20 x 3/8 screws for top support holes.

- A. Insert slide arm rod into slide arm tube setting the distance between the pinion square and the slide stud at 13-1/2" (343). Install 9/64" hex drive socket head screw from screw pack. (See illustration to right)
- B. Using an adjustable wrench, rotate pinion 45° toward hinge, as shown at right. With the arm assembly parallel to the door, secure arm to pinion when square of the pinion aligns with the square in the arm. Secure with countersunk washer and 1/4-20 Flat Head Screw (with thread lock) provided.

Note: Center threaded hole of slider arm should align with seventh hole of the slider tube. Stud in slider arm should point to same side as holes in slider tube (see illustration on Page 3).

000000000000000

80-9357-0006-020 (10-15)

10. Hinge (Pull) Side - Secure Arm to Slider

A. Once arm is securely fastened to closer, rotate arm around and insert stud into slide block in track assembly.

B. Secure by pushing in on the retainer clip that extends from the slide block until it is flush with the slide block (see illustration below). *Note: Retainer clip should be on latch end of slide block.*

Door Leaf Width -	Door Weight in Pounds (kg)				
Inches (mm)	100 (45.4)	125 (56.7)	150 (68.0)	175 (79.4)	200 (90.7)
30 (762)	3.0	3.0	3.0	3.0	3.5
36 (914)	3.0	3.5	3.5	4.0	4.0
42 (1067)	3.5	4.0	4.0	4.5	4.5
48 (1219)	4.0	4.5	4.5	5.0	5.5

Backcheck - adjust the backcheck valve to have a minimum opening time to backcheck or 80 degrees (whichever comes first) based on Table 1.

Closing Time - adjust Latch and Sweep valves to have a minimum closing time from 90 degrees to Latch Check or 10 degrees (whichever comes first) based on Table 1. Matrix values are in seconds.

13. Electrical Connections

Make wiring connections using Wiring Instructions on following pages.

14. Input Power Configurations

CONCEALED WIRING

15 (381) Max. Distance for Placement of Power Input Receptacle (shaded region)

Thread conduit fitting into backplate as shown for low voltage control wiring. CHECK LOCAL CODES. Pull conduit out of header and attach to conduit fittings before mounting. Secure operator to door frame.

SURFACE WIRING

Thread conduit fitting into backplate as shown for low voltage control wiring. CHECK LOCAL CODES. Pull conduit out of header and attach to conduit fittings before mounting Secure operator to door frame.

13. Input Power Configurations

Standard 3-prong Power Input Receptacle to be placed within shaded region only due to length of power supply cord provided.

15. Final Electrical and Mechanical Setup

A. Confirm all mechanical adjustments have been made and wiring connected per Page 7 and 8.

Hinge or Pivot

- B. Turn on facility's main circuit breaker.
- C. Turn power to unit on at the Unit Power Switch and turn the Breaker Switch to "RESET".

D. Using a short jumper cable, jump terminals 1 and 2, see Fig. 2 below, to activate unit. When door reaches 20°, switch Breaker Switch to "**OFF**" position cutting power to the unit. Allow door to fully close (door may be manually pulled closed).

ASSA ABLOY

15. Final Electrical and Mechanical Setup Continued

E. Adjust Closing Position Magnet (See Fig. 3) - With door in the closed position, use finger to slide Closed Position Magnet so it aligns directly with the Reed Switch.

F. Adjust Open Position Magnet - Use fingers to slide

- F cont. Open Position Magnet 180° from Open Position Magnet.
- G. Flip Breaker Switch to "RESET" to turn power on. Jump terminals 1 and 2 (as shown in Fig. 2) to activate door. Note open position of the door. Allow door to close.
- H. Use finger to readjust the Open Position Magnet to desired door open position.
- I. Repeat Step G to verify door open position.
- J. Make all connections necessary for any accessories to the 4-position Accessory Terminal (see Pages 10-11).
- K. Make necessary adjustments to inverter (see Page 9). Replace cover and cover screws.

Standard Function with Switches

2. Radio Frequency Feature can be purchased as a separate kit.

88

Fault	Possible reasons why	Remedies/Explanations
The door does not open	Control switch is set to OFF position	Change the setting of the ON/OFF switch
- The motor does not start	Circuit breaker is set to OFF position	Reset circuit breaker to the ON position
	Electrical power is missing	Check the electrical power switch
	Activation unit does not function	Jump activation input
- The motor starts	Motor is driving in wrong direction	Flip Door Mounting Dip Switch to other direction
	Something jammed beneath the door	Remove object
	Arm has come loose	Re-time and re-install arm.
The door does not close	Spring tension too low	Increase spring tension per preceding instructions
	Arm has come loose	Re-time and re-install arm.
	Something jammed beneath the door	Remove object

433MHz Receiver User's Guide

Hand-Held Configuration

- 1. Set dip switches to the receiver to the desired activation cycle (dip switch 1 Toggle or Pulse and dip switch 2 0.5s or 10s hold.
- Press either Learn w/ Delay Button or Learn w/o Delay Button on the receiver depending on the activation requirements (if delay learn is selected, adjust potentiometer to counterclockwise limit, 0 second delay). Red LED on receiver will flash. After learn cycle is complete, adjust potentiometer to desired delay time (0 - 30 sec).
- 3. Depress transmitter button repeatedly until Blue LED on the receiver illuminates (indicating reception of signal from transmitter). NOTE: Repeat Steps 2 - 3 to program additional transmitters.
- 4. To test the system, depress transmitter button (Red LED on Transmitter will illuminate) and observe that the Blue LED illuminates on the receiver. This indicates that the relay has been activated.

Push Plate Configuration

- 1. Before beginning, it is easiest to have already prepared the installation of the push plate.
- 2. Connect the wires from the transmitter to the NO and COM contacts of the push plate's switch.
- 3. Follow Steps 1 4 (Hand-Held Configuration); depress the push plate to activate the transmitter.
- 4. Attach the transmitter to the inside of the electrical box and complete the installation.

Removing Transmitter Code(s)

Single Transmitter Code:

- Press both Delay and No Delay Buttons simultaneously until Red LED flashes once (approximately 1 second).
- Press transmitter button twice within 10 seconds and the transmitter code will be deleted.

All Transmitter Codes:

Press and hold both Delay and No Delay Buttons simultaneously until Blue LED illuminates then release (approximately 10 seconds).

Troubleshooting

Problem: The LED on my receiver is just flickering and I'm unable to program and/or it won't work.

<u>Solution:</u> You have a push plate stuck or faulty transmitter. Disconnect each push plate until the LED goes out. If LED does not go out, remove each transmitter battery until it does. Replace the appropriate transmitter.

<u>Problem:</u> Receiver intermittently doesn't receive the transmitter(s) signal.

<u>Solution:</u> You may extend the receiver antenna wire only in multiples of 6-3/4" (171), i.e. 6.75 x 4 = 27" (686) of extended antenna wire.
